WHAT IS EFS and HOW DOES IT WORK?

What is EFS?

EFS is a 'POP3 Connector'. It retrieves email from a single pop3 mailbox at your Internet Provider and redirects messages to mailboxes on your local SMTP mail server such as Microsoft Exchange (or in fact any SMTP Mail Server *) EFS is compatible with all versions of Microsoft Exchange Server * - see below. EFS requires you to have a registered Internet domain name to accept and redirect mail for.
